

Internet Data Mining for the Investigator

8 Hours – Continuing Training Credit

The Internet is a valuable resource to use if you use the techniques of data mining. This seminar provides you with tips and tools that professionals use to conduct a thorough search of the Internet for information about people that is readily available. You'll learn how to search the deep web, social networking sites, public records and other information most counties and states make available online.

Attendees should bring a laptop computer that is capable of connecting wirelessly to the internet.

Instructor: Chester M. Szoltysik MBA, CCFE, CSIS; is the Manager of Information Systems & Technologies for AZPOST. He is a Certified Computer Forensics Examiner and a Certified Content Specialist in Information Security
